

VALMET

OFF-ROAD TRANSPORTATION
SYSTEMS

Do you have a problem in finding suitable equipment for transportation tasks in difficult conditions?

Do you find the vehicles are not versatile enough?

Are the conservation restrictions a hindrance to transportation tasks?

To solve transportation problems and meet ecological requirements Valmet Corporation has developed the **ecotrack** product range with transportation vehicles incorporating the new elastic track feature.

ONE VEHICLE IN DIFFERENT TERRAINS, ON THE ROAD

The Valmet **ecotrack** product range consists of transportation vehicles with a loading capacity of 10—20 tonnes and a driving speed of up to 50—60 km/h. They can be equipped for the transportation of containers, extra-wide loads as well as bulk cargo. The vehicles can be equipped with cargo-handling gear for load handling and with a crane for bulk handling.

The **ecotrack** rubber track system makes it possible to carry out tasks with minimal ground damage even in the most sensitive terrains.

The same vehicle is suitable for different terrain types and also on the road.

The **ecotrack** vehicle is much faster than normal heavy tracked vehicles.

AND IN CITIES. FAST-MOVING, NO GROUND DAMAGE.

Valmet Corporation is a large Finnish company which manufactures high-quality investment goods, tailor-made for customers, in numerous plants, both in Finland and abroad, and carries on business throughout the world.

VALMET is a specialist in cross-country mobility and material handling.

Efficient material handling equipment, manufactured by VALMET's Transportation Equipment Group, is used in ports and production units all over the world.

VALMET's logging machines work effectively in the most difficult terrains and climatic conditions. They are constructed according the latest engineering desing principles, for Valmet has over 20 years' experience in this field.

VALMET's snowmobiles are known throughout the world from the arctic circle to Antarctic. They are specially designed for professional use.

VALMET's Off-Road Division is a business unit, which is specialized in the developing of cross-country vehicles for transporations under difficult conditions. The **ecotrack** vehicles are part of its product range.
